## GNU screen terminal commands cheat sheet

Follow me on https://linkedin.com/in/yurislobodyanyuk/ for updates.

Command	Description
~/.screenrc & /etc/screenrc	Commands the screen runs on start up.
screen -ls	List active screen sessions
screen -Q windows	List windows' names inside screen session
screen -S <session name=""></session>	Create a new screen session with the name <session name=""></session>
screen -x	Attach to the running session, also by its name
screen -r <session name=""></session>	
screen -dRR	Attach to the screen session, detach on other display if attached. If no session exists, will create a new one.
C-a d	Detach from the session, session keeps running. Here, and further ${\bf C}$ means Ctrl.
C-a c	Create new window in the session.
C-a C-a	Switch to the previous window.
C-a "	List all windows with option to highlight and enter any of them.
C-w	Show a list of active windows with their numbers.
C-a <number></number>	Switch to the window number number.
C-a '	Switch to the window by its name.
C-a n	Switch to the next window.
С-а р	Switch to the previous window.
exit	Exit and close current window. If it was the last window in a session, exits screen terminating the session.
C-a k	Kill the current window forcefully (not recommended).
C-a : quit	Quit screen session compeltely terminating it. Alternatively - exit all screen windows.
C-a A	Rename current window.

Split windows display horizontally. Use C-a c to create a new window inside the new split or C-X to close this part of split.  Ca   Split windows display vertically. Available starting screen 4.01, i.e. not available on Mac 2020 which still uses screen 4.00.  C-a tab   Jump to the next region in a split window display.  C-a X   Remove the region in focus.  C-a [ or C-a <esc>   Enter buffer navigation mode to scroll output buffer, copy, edit and paste later. Navigation commands as per vim if Vim is set as editor. <esc> to leave the buffer mode.  <space>   Start/stop selection while in the buffer mode to select the text. Press <space> or &lt;=Inter&gt; to copy the selected text. E.g. to select/copy the whole buffer: C-a [ 9g <space> 6 <space> <esc>   Paste the selected text at the cursor of the terminal, or create a new window and say start Vim there and paste into it while in Insert mode.  C-a h   Dump the contents of the currently visible terminal to hardcopy. <n> file, where <n> is auto-incrementing number of your window.  C-a H   Start/end logging all output of the current window into a file screenlog. Where K is the window number: The data is appended, not overwritten if the file exists. Output printed before that is not logged.  C-a a   Send Ctrl-a sequence to the shell in the window, useful to jump to the beginning of the line.  C-a M   Monitor window for 30 seconds of silence, will notify you of any activity while you work in other window.  C-a ?   Show all key bindings help.</n></n></esc></space></space></space></space></esc></esc>	Command	Description
starting screen 4.01, i.e. not available on Mac 2020 which still uses screen 4.00.  C-a tab  Jump to the next region in a split window display.  C-a X  Remove the region in focus.  C-a [ or C-a <esc> Enter buffer navigation mode to scroll output buffer, copy, edit and paste later. Navigation commands as per vim if Vim is set as editor. <esc> to leave the buffer mode.  <space>  Start/stop selection while in the buffer mode to select the text. Press <space> or <enter> to copy the selected text. E.g. to select/copy the whole buffer: C-a [ gg <space> 6 <space> <esc> C-a ]  Paste the selected text at the cursor of the terminal, or create a new window and say start Vim there and paste into it while in Insert mode.  C-a h  Dump the contents of the currently visible terminal to hardcopy. <a href="mailto:normenting">normenting number of your window</a>.  C-a H  Start/end logging all output of the curent window into a file screentlog. N where N is the window number. The data is appended, not overwritten if the file exists. Output printed before that is not logged.  C-a a  Send Ctrl-a sequence to the shell in the window, useful to jump to the beginning of the line.  C-a M  Monitor window for activity. When enabled, will notify you of any activity while you work in other window.  C-a _  Monitor window for 30 seconds of silence, will notify you in any other window as `Window 0: silence for 30 seconds.</esc></space></space></enter></space></space></esc></esc>	C-a S	create a new window inside the new split or <b>C-X</b>
display.   C-a X   Remove the region in focus.   C-a [ or C-a <esc>   Enter buffer navigation mode to scroll output buffer, copy, edit and paste later. Navigation commands as per vimif Vim is set as editor. <esc> to leave the buffer mode.   Start/stop selection while in the buffer mode to select the text. Press <space> or <enter>   Start/stop selection while in the buffer mode to select the text. E.g. to select/copy the whole buffer: C-a [ gg <space> of <space> (space&gt; csc&gt;)   Paste the selected text at the cursor of the terminal, or create a new window and say start Vim there and paste into it while in Insert mode.   C-a h</space></space></enter></space></esc></esc>	C-a	starting screen 4.01, i.e. not available on Mac
C-a [ or C-a <esc> Enter buffer navigation mode to scroll output buffer, copy, edit and paste later. Navigation commands as per vim if Vim is set as editor. <esc> to leave the buffer mode.  Start/stop selection while in the buffer mode to select the text. Press <space> or <enter> to copy the selected text. E.g. to select/copy the whole buffer: C-a [ gg <space> 6 <space> <esc> C-a ]  Paste the selected text at the cursor of the terminal, or create a new window and say start Vim there and paste into it while in Insert mode.  C-a h  Dump the contents of the currently visible terminal to hardcopy. <n> file, where <n> is auto-incrementing number of your window.  C-a H  Start/end logging all output of the curent window into a file screenlog. N where N is the window number. The data is appended, not overwritten if the file exists. Output printed before that is not logged.  C-a a  Send Ctrl-a sequence to the shell in the window, useful to jump to the beginning of the line.  Monitor window for activity. When enabled, will notify you of any activity while you work in other window. Command	Description	
Save session state	This is not possible. If you use the same layout each session, you can put start up commands to re-create it in .screence file in your home directory, but still - you cannot save the current session state, i.e. contents of the windows and their layout.	
Sharing session (e.g. for pair programming/tutoring)		
Original session (say user1):  1. Set suid root bit on screen binary: sudo chmod +s /usr/bin/screen  2. Inside session you want to share: C-a: then multiuser on to enable sharing session.  3. Add usernames to share the session with: C-a: acladd <username>  Connecting user (say user2):  1. Run in shell: screen -x <sharing username="">/, in our example screen -x user1/</sharing></username>	to remove write permissions from all users on all windows: :aclchg * -w #	
C-a *	See who is connected to your shared screen session.
